

Full digital system of designing and executing aligners “In House”

- Treatment plan development using virtual models DDP-Ortho
- Number of aligners depends on the case and is controlled by the physician
- Precise determination of the route for movement of teeth
- Material of increased durability and resistance to discolouration
- Last aligner is intended for long-term use as a **Retainer for Life®**
- An option to make **A-ligner®** by yourself if You have 3D printer in your place „In House”

Work process:

- Creating the user account - application form at www.ortodonta.com
- Downloading free software DDP-Ortho
- Ordering diagnostics model DDP - version „semipro“
- Preparing a set-up by the physician supported by the technician
- Developing the course of treatment approved by the physician
- Independent making aligners (3D model print + thermoforming of foils) from option “In House” or in laboratory:
Price for aligner system preparation is PLN 285* (including virtual model semipro, technical assistance, determination of tooth movement trajectories), plus PLN 100* for each aligner

Please note:

- Scope of laboratory works: digital processing, 3D print-outs, execution of aligners, the physician may delegate to various partner laboratories

We will teach You how to do it in Your own laboratory

*price for season 2020
